EARTHQUAKE IMPACT ON LOW AND MODERATE INCOME HOUSING

Report #4

November 20, 1989

SUMMARY OF BUILDINGS AND UNITS DAMAGED

The following Summary is based upon the most recent complete D.P.W. report, issued November 12, 1989. Subsequent to that report, additional inspections have been made, though not reported. An adjustment factor has been used in the following summary.

1. Summary of Housing Damage	Red	Yellow	Green	Total
Total Number of Units				
Low and Moderate Income	986	3,069	11,087	15,142
Market Rate	496	1,737	7,502	9,735
Total	1,482	4,806	18,589	24,877
2. Summary of Residential Building Damage	Red	Yellow	Green	Total
Total Number of Buildings				
Low and Moderate Income	93	373	877	1,343
Market Rate	58	368	2112	3,881
JAN 24 1990 Total	151	741	2,989	5,224

REPAIR AND REPLACEMENT COSTS OF \$214,000,000

INSTITUTE OF GOVERNMENTAL STUDIES LIBRARY

The average repair or replacement costs for the **Red structures could be \$80,000 per unit, or \$118 million total**. This total assumes no land costs. The total repair costs for the **Yellow buildings could average \$20,000 per unit, or \$96 million total**. Site acquisition, administrative and technical costs, construction financing costs, and other indirect costs are not included in this estimate. The costs for seismic preventative repair on undamaged but potentially unsafe buildings is also not included. Including these costs could increase the above totals by 100% or more.

Note: All numbers are estimates projected from current data and records. The total number in any column may change by up to 10% in either direction before a final report is certified.

EXPLANATION

The Mayor's Office of Housing has analyzed the information regarding the damage to residential buildings in San Francisco. The damage reports have been provided in summary form by the Department of Public Works, after two weeks of an intensified effort to determine the damage to approximately 5000 buildings throughout the city. Repeat inspections have been made of many structures during this period, and changes in damage classification have occurred as part of this process. The inspections have been made only to determine the extent of structural damage incurred.

The Department of Public Works will need several more days to complete their summary reports, and to correct errors and omissions in the reports. As of 2 p.m. today, approximately 5,000 buildings have been given final classification. More loggings still need to be recorded.

At this date, the margin of error may be 10-15% in either direction.

CLASSIFICATION OF DAMAGE

The damage assessment reports have utilized the following codes to describe building damage:

Green - Indicates no apparent structural damage, and safe for unlimited occupancy. Buildings in this category may have sustained non-structural damage, such as broken windows, damaged plaster, disrupted utilities, or damaged exterior surfaces. Repair of these damages may be required to restore full habitability to the buildings.

Yellow - Indicates possible structural damage to portions of the building, requiring limited occupancy. Owners are required to retain a structural engineer to verify the extent of the damage. Owners will be required to correct the damage. In addition to the non-structural damage that may have occurred, the structural damage ranges from door and window lintels, and minor structural elements, to entire portions of the building having sustained moderate displacement, cracking, or deformation of load bearing walls, columns, floors, beams, joists, or parapets.

Red - Indicates severe structural damage, determined to be unsafe for occupancy and a potential public hazard. In addition to the requirements and characteristics of the Yellow buildings, the majority of the Red buildings require immediate shoring to prevent possible collapse. At the extreme, immediate demolition of some of these buildings may be required by the Department of Public Works. At least 10 residential buildings including over 500 units of housing have been demolished as of this date.
